

Joust Client Portal

— Redesign preview

Screenshots of the `claude/portal-redesign` branch (commit `3a87377`), rendered against sample data. Not yet deployed.

● Client seat

what Kenda sees (`?client=kenda`)

● Admin seat

what Joust sees after signing in

Home (Today)

Notice the iOS large-title nav with the date eyebrow, the Wallet-style stacked action cards ("6 posts ready for your review"), the "Coming up" scroller, and an Activity list written in plain sentences with no filenames. Admin gets the same page plus a **Client responses** card and a Compose / Batch / Upload row at the bottom — and a fifth, orange **Studio** tab that clients never see.

/?client=kenda

/?client=kenda

Scroll to the bottom for "Client responses" and the Studio quick row.

/?client=kenda

/?client=kenda

● Admin Desktop · Light

Same page, admin seat: five items in the sidebar, Studio last.

/?client=kenda

● Admin Desktop · Light

Detail: bottom of the admin Home — "Client responses" (last 7 days) and the Studio row.

/?client=kenda

Posts — triage list

Notice the segmented control (**To Review** · **Approved** · **Scheduled** for clients; admin gets a fourth, **Needs changes**), the month pill top-right, and compact cards with a status pill, media

count and comment count. Denied posts never appear on the client seat — they only show up for admin under "Needs changes". Grouped inset lists with hairline separators throughout.

● Client iPhone · Light

/posts?client=kenda&status=pending

● Client iPhone · Dark

/posts?client=kenda&status=pending

● Admin iPhone · Light

Four segments incl. "Needs changes"; the Studio tab is the fifth tab.

/posts?client=kenda&status=pending

Client Desktop · Light

/posts?client=kenda&status=pending

Client iPhone · Light

Approved segment — no swipe hint here, only on To Review.

/posts?client=kenda&status=approved

Post detail

Notice that on desktop the detail opens as a 480px panel **beside** the list (the open row stays highlighted); on the phone it is a sheet with a grabber and centred title. Inside: a carousel with dots and a "1/3" glass counter, an Instagram-style caption with accent hashtags and "Copy caption", a message composer, and a sticky **Deny / Approve** footer. Approved posts swap the buttons for a green "Approved · Joust will schedule this" row. Deny always asks for a note (the field appears on tap, so it isn't in a static capture).

• Client Desktop · Light

Right panel beside the list; month pill and avatar stay visible.

/posts?client=kenda&post=1

• Client iPhone · Light

Sheet over the list.

/posts?client=kenda&post=1

• Client iPhone · Light

• Client iPhone · Light

Scheduled: purple "Scheduled" state row.

• Client iPhone · Light

Approved: green "Approved" · Joust will schedule this" row replaces the buttons.

/posts?client=kenda&post=3

/posts?client=kenda&post=2

A playable video (.webm): autoplays muted with a "Tap to unmute" pill and a "0:01" timestamp chip beside the composer.

/posts?client=kenda&post=12

Assets — Library grid & viewer

Notice the 3-up (phone) / 5-up (desktop) square grid with a glass status badge bottom-left, the green ring + check on approved tiles, the **To Review** · **Approved** chips and Select button. Tapping a tile opens a full-screen dark viewer: glass top bar (close · "Library image" · "1 of 4" · status pill), a **Deny** · **Approve** · ... glass toolbar, arrows on desktop. A .mov file that Chrome can't play shows the "Preview not supported in this browser" card with Open video / Download instead of a broken player.

Client iPhone · Light

/assets?client=kenda&view=library

Client Desktop · Dark

/assets?client=kenda&view=library

Client iPhone · Light

Viewer open on a pending image.

/assets?client=kenda&view=library&asset=1

Client iPhone · Light

The .MOV asset: "Preview not supported" fallback card (Chrome).

/assets?client=kenda&view=library&asset=41

Client Desktop · Light

Viewer on desktop, with previous / next arrows.

Collections (Tires)

Notice the collection rows — 56px thumb, "1 to review · 1 approved", a red count badge — and, once inside, the "← Tires" back button plus the pinned **Reference** card at the top so the client always has the approved reference image next to the new renders. Collections with nothing left for the client to see are dropped from the client's list.

● Client iPhone · Light

/assets?client=kenda&view=collections

● Client iPhone · Light

Inside "Klever R/T": Reference card pinned above the grid.

/assets?client=kenda&view=collections&item=1

Client Desktop · Light

/assets?client=kenda&view=collections&item=1

Projects

Notice **Open / Done** sections with counts, priority dots, an "In progress" pill, and done rows struck through with green checks. The client seat is **view-only** — no "+" button, no tap-to-complete targets. Admin gets the "+" and the controls.

Client iPhone · Light

Client: read-only list.

Admin iPhone · Light

/projects?client=kenda

Admin: "+" in the nav and check targets on each row.

/projects?client=kenda

Studio ADMIN ONLY

Notice the large title in Joust orange (the one admin-only surface), the **Compose / Batch / Uploads / Posts** segments, and on Compose the **Approved Pool** picker — All / Library / per-collection chips with a group label on each tile — beside a live, phone-width **Preview** that uses the exact same detail component the client will see. Uploads and Batch are plain drop zones with the size limits stated per endpoint.

● Admin Desktop · Light

Compose: Approved Pool on the left, live preview on the right.

/studio?client=kenda&tab=compose

● Admin Desktop · Light

`/studio?client=kenda&tab=uploads`

● Admin Desktop · Light

`/studio?client=kenda&tab=batch`

States

Notice how the edges behave: a link without a client returns a plain **400 page** with no tab bar ("This link is missing its client..."), Login follows the same tokens in light and dark, an empty month says "Nothing to review in November.", and an empty collection shows the **"All caught up"** check. The Home zero-state ("You're all caught up") exists in code but no sample client has zero pending items, so it isn't pictured.

Client iPhone · Light

Missing client → HTTP 400, no tab bar.
/posts

Client iPhone · Light

/login

Client iPhone · Dark

/login

Client Desktop · Light

After "Sign out".
/login?signed_out=1

Client iPhone · Light

Empty month.

• Client iPhone · Light

Empty collection: "All caught up". (Captured before the polish pass; this collection is now hidden from the client list entirely, but the empty state is unchanged.)

/assets?client=kenda&view=collections&item=2

How to test for real

Screenshots show the layout; three things need a live environment.

1. Put the branch in a staging folder on GoDaddy with a copy of the database.

Upload `claude/portal-redesign` to a sibling folder (e.g. `/socialmedia-staging/`) on the same GoDaddy host, import a dump of the live database into a second database, and point the staging config at that copy. Then approving, denying and uploading on staging can't touch real client data.

2. Click these URLs on staging (prefix each with the staging folder's address):

- `/?client=kenda` — Home, client seat

- `/posts?client=kenda` — Posts; open one, try Approve, and try Deny without a note (it should refuse)
- `/assets?client=kenda&view=library` and `&view=collections` — grid, viewer, Reference card
- `/projects?client=kenda` — should be view-only
- `/login`, then `/studio?client=kenda` — sign in as Joust; the orange Studio tab and "Client responses" card should appear, and `/posts?client=kenda` should now show "Needs changes"

3. **Check `.mov` playback on a real iPhone.** Chrome on a Mac or PC can't play iPhone `.MOV` files, so every capture here shows the "Preview not supported" fallback card. Only Safari on an actual iPhone (or iPad / Mac) can confirm that the clip plays inline in the viewer and in the post sheet, autoplays muted, and that "Tap to unmute" works.

Capture artefact, not a bug: these are full-page captures. Fixed chrome — the phone's bottom tab bar and the desktop sidebar — is drawn once at its viewport position, so on long pages (Home, Posts) the tab bar appears mid-image and the desktop sidebar stops at 900px. In the real app it stays pinned to the edge of the screen.

Desktop captures are cropped to the first 1400px of page height; phone captures are complete and scroll inside their frame. All data (Kenda Tires, Klever R/T, Bearclaw HTR, the placeholder tyre renders) is seeded sample data.

Captures: `qa/shots/20260905-191616` (post-polish, primary) · `20260905-185756` and `20260905-190254` (earlier full runs, for pages not in the polish set). Viewports `375×812 @2×` and `1440×900`. Motion variants; reduced-motion twins are pixel-identical.
